

Ontologies (mini)Workshop

---- IDS internal training

Kody Moodley & Stuti Nayak

Institute of Data Science
30-10-2018

Learning objectives

- Introduction [20min]
 - What is an ontology?
 - What are some uses of ontologies relevant to IDS research?
- Hands-on [40min]
 - Basics of authoring an ontology using ontology editing software
 - Example application of ontologies: Disease Expert System
 - **Entity disambiguation**
 - **Data integration**
 - **Reasoning**

Introduction to Ontologies

What are they?

**An ontology is a description of the world or some part of it
(concerned with defining things)**

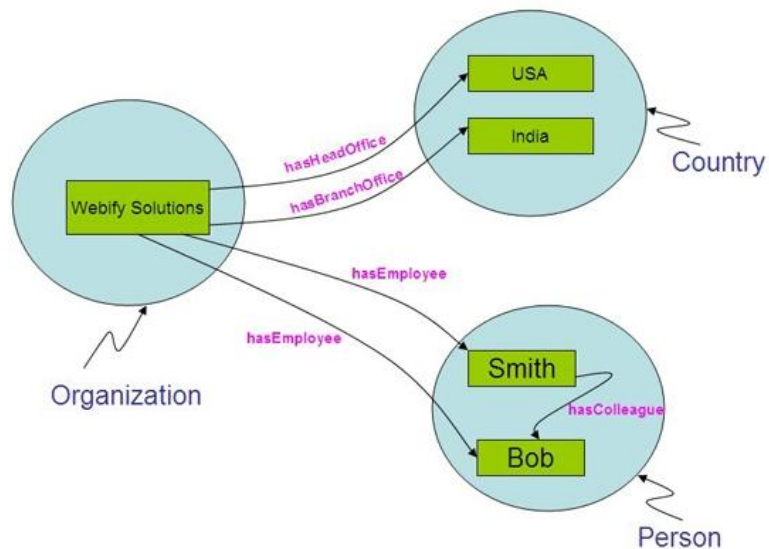

What are they?

Ontology in Computer Science

“A **formal** specification of knowledge about a domain that enables **machines** to derive implicit information from it”

What are they?

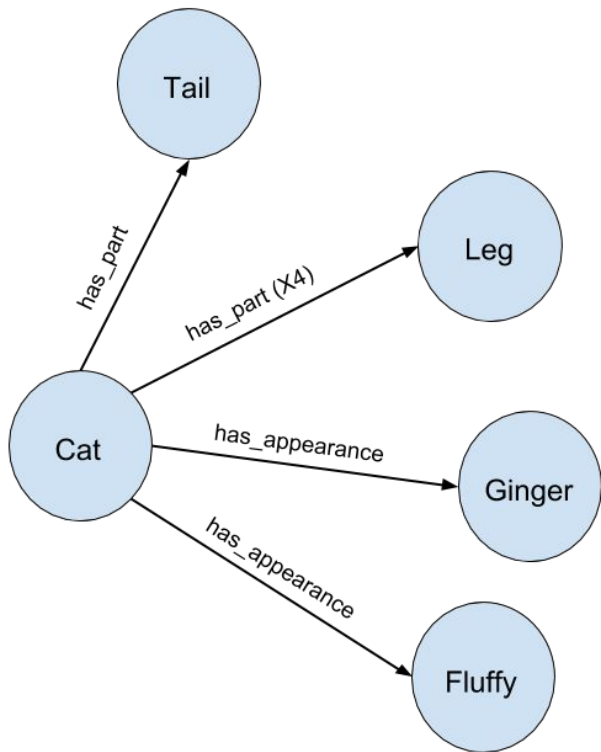

OR

1. $\text{Organization} \sqsubseteq \exists \text{hasHeadOffice}.\text{Country}$
2. $\text{Organization} \sqsubseteq \exists \text{hasBranchOffice}.\text{Country}$
3. $\text{Organization} \sqsubseteq \exists \text{hasEmployee}.\text{Person}$
4. $\text{Organization}(\text{webify_solutions})$
5. $\text{Country}(\text{usa})$
6. $\text{Country}(\text{india})$
7. $\text{Person}(\text{smith})$
8. $\text{Person}(\text{bob})$
9. $\text{hasColleague}(\text{smith}, \text{bob})$

Logical sentences (axioms)

Classes, relations, instances

Why make ontologies formal?

- What does “has_part (x4)” mean?
 - Cat has 4 parts in total, one of which is a leg?
 - Cat has 4 legs?
- Cat refers to a specific cat or *all* cats?

From syntax to semantics

Modus ponens (rule of inference):

$P \rightarrow Q$
 P
Therefore Q

Syntactical reasoning

From syntax to semantics

Animal	\sqsubseteq	$\neg \text{Plant}$	NO
Herbivore	\sqsubseteq	Animal	YES
Herbivore	\sqsubseteq	$\forall \text{eats.Plant}$	NO
Animal(fluffy)			YES
Herbivore(fluffy)			NO

Alfred Tarski (c. 1933)

Semantic reasoning

The Semantic Web Vision

Tim Berners-Lee

Inventor of the World Wide Web

What is the Semantic Web?

"...an extension of the current web in which information is given well-defined meaning, better enabling computers and people to work in cooperation."

Tim Berners-Lee et al., 2001

OWL - The Web Ontology Language(s)

- W3C recommendation in 2004 (OWL 1)
- Description Logics (DLs) underpin OWL
- Latest major version: OWL 2
- Profiles: OWL 2 Full, OWL 2 DL, OWL 2 RL, OWL 2 EL
- Structural specification (no commitment to concrete syntax)
- Concrete syntax examples: RDF/XML and OWL/XML (.rdf or .owl), Turtle (.ttl)

What does an OWL statement look like?

English: “An actress is a female person that plays a role in a movie”

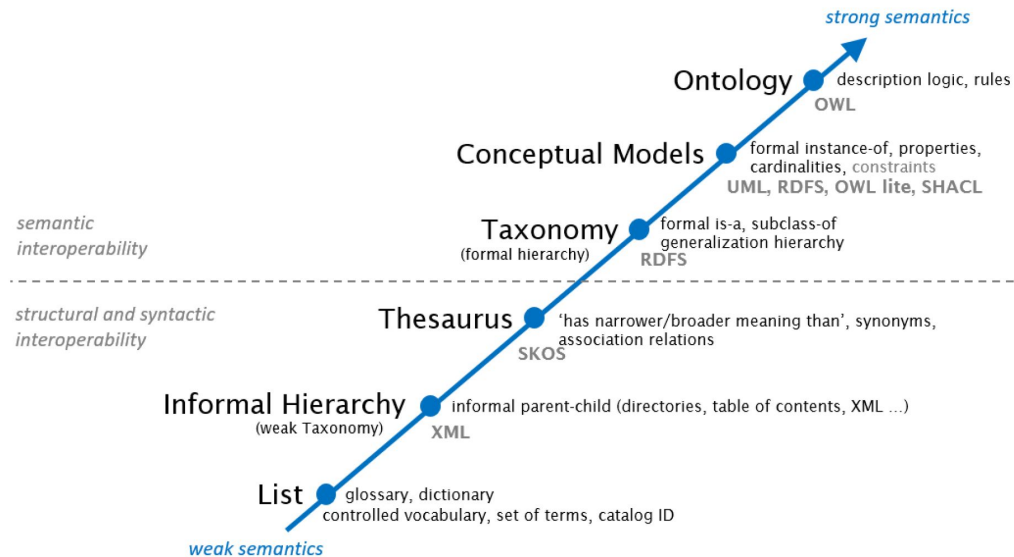

DL: Actress \equiv Female $\sqcap \exists \text{playsARoleIn.Movie}$

OWL (XML syntax):

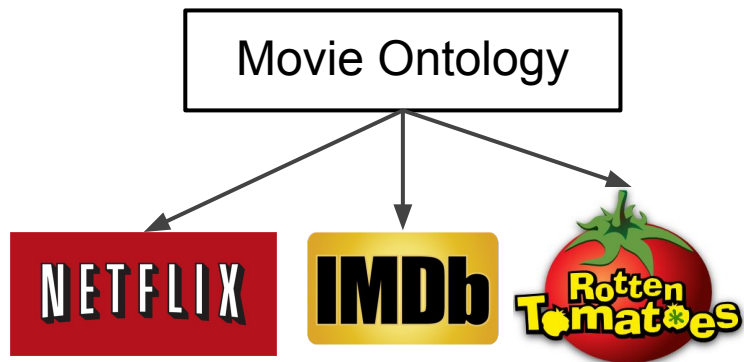

```
<owl:Class rdf:about="http://movies.com/movieontology.owl#Actress">
  <owl:equivalentClass>
    <owl:Class>
      <owl:intersectionOf rdf:parseType="Collection">
        <rdf:Description rdf:about="http://movies.com/movieontology.owl#Female"/>
        <owl:Restriction>
          <owl:onProperty rdf:resource="http://movies.com/movieontology.owl#playsARoleIn"/>
          <owl:someValuesFrom rdf:resource="http://movies.com/movieontology.owl#Movie"/>
        </owl:Restriction>
      </owl:intersectionOf>
    </owl:Class>
  </owl:equivalentClass>
</owl:Class>
```

Species of ontology “in the wild”

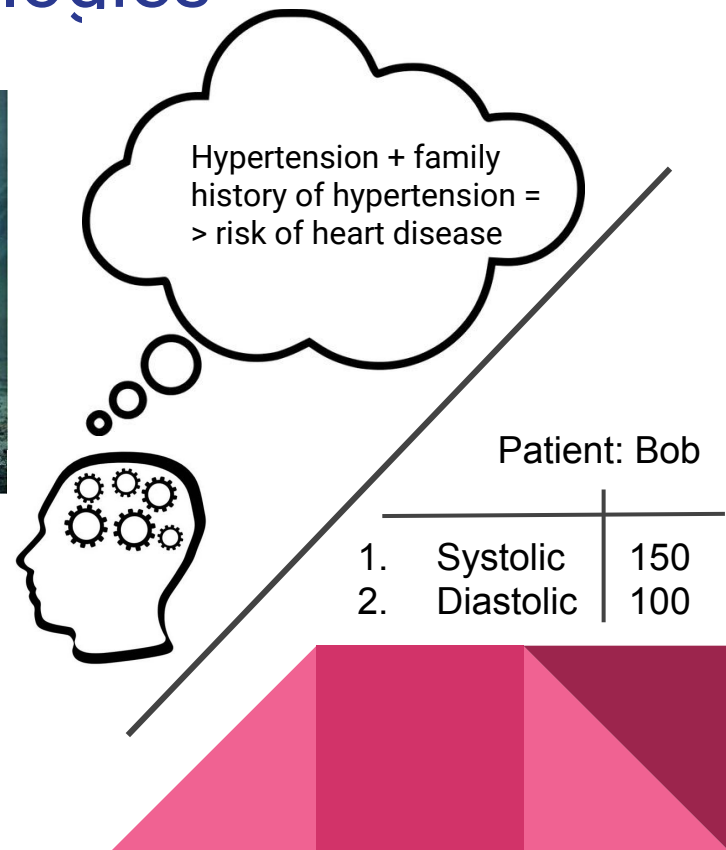

Summary: general uses of ontologies

share common understanding of a domain
enable reuse of domain knowledge

make domain assumptions **explicit**
separate domain & operational knowledge

Ontologies in Life Sciences

SNOMED (General), Foundational Model of Anatomy (FMA), NCI (Cancer)

Class hierarchy: 'Aortic valve'

Class hierarchy (inferred)

- Anatomical structure
 - Acellular anatomical structure
 - Anatomical cluster
 - Anatomical junction
 - Biological macromolecule
 - Body
 - Cardinal body part
 - Cardinal cell part
 - Cardinal organ part
 - Organ component
 - Anatomical valve
 - Anal valve
 - Cardiac valve
 - Aortic valve**
 - Atrioventricular valve
 - Pulmonary valve
 - Variant cardiac valve
 - Vestigial cardiac valve
 - Circular fold of small intestine
 - Ileocecal valve
 - Lacrimal fold
 - Lymphatic valve
 - Lymphatic valvule
 - Spiral valve of cystic duct
 - Venous valve
 - Valve of axillary vein
 - Valve of external jugular vein
 - Annular tracheal ligament

Annotations: 'Aortic valve'

Annotations

- label (language: en)Aortic valve
- hasDefinition
 - genid74267
- hasOBONamespacefma

Description: 'Aortic valve'

Equivalent To

- Cardiac valve
- attaches_to some 'Fibrous ring of aortic valve'
- constitutional_part_of some 'Left side of heart'
- constitutional_part_of some 'Left ventricle'
- constitutional_part_of some 'Outflow part of left ventricle'
- constitutional_part_of some Heart

SubClass Of (Anonymous Ancestor)

- attaches_to some 'Fibrous ring of heart'

Source: Meghyn Bienvenu, CNRS

Ontologies in Medicine

CHEST 2V FRONTAL/LATERAL XXXX, XXXX XXXX PM

Comparison: None

Indication: Burmese male has complete TB treatment

Findings: Both lungs are clear and expanded with no infiltrates. Basilar focal atelectasis is present in the lingula. Heart size normal. Calcified right hilar XXXX are present

Impression: No active disease.

MeSH

Major

Pulmonary Atelectasis
/ lingula / focal
Calcinosis
/ lung / hilum / right

- Querying medical records (e.g. find patients eligible for medical trials)
 - Myocardial infarction vs. MI. vs. heart attack vs. 410.0
- Supporting annotation and visualisation tools (patient scans and x-rays)

The Linked Data Paradigm

Tim Berners-Lee

Inventor of the World Wide Web

OWL vs Resource Description Framework (RDF)

- OWL **defines** terms, Resource Description Framework (RDF) provides mechanism for **associating** terms with data entities to categorise & link them
- Linked data:
 - Give things **unique names (URIs)**
 - Make these names **dereferencable** on the Web (give them URLs)
 - At these URLs **provide info** about the things
 - **Include links** to other URIs so we can discover related things

What do RDF triples look like?

“Angelina Jolie is an actress, she acts in the movie Lara Croft: Tomb Raider” ...and “she has breast cancer.”

PREFIX rdf: <<http://www.w3.org/1999/02/22-rdf-syntax-ns#>>

PREFIX dbpedia: <<http://dbpedia.org/page/>>

PREFIX mov: <<http://movies.com/movieontology.owl#>>

PREFIX rdfs: <<http://www.w3.org/2000/01/rdf-schema#>>

PREFIX owl: <<http://www.w3.org/2002/07/owl#>>

PREFIX obo: <<http://purl.obolibrary.org/obo/>>

PREFIX wikidata: <<https://www.wikidata.org/wiki/>>

- dbpedia:Angelina_Jolie mov:playsARoleIn dbpedia:Lara_Croft:_Tomb_Raider .
- dbpedia:Angelina_Jolie rdf:type mov:Actress .
- dbpedia:Lara_Croft:_Tomb_Raider rdf:type mov:Movie .
- dbpedia:Angelina_Jolie obo:RO_0002200 obo:DOID_1612 .
- obo:RO_0002200 rdfs:label “has phenotype”^xsd:string .
- obo:DOID_1612 rdfs:label “Breast Cancer”^xsd:string .
- obo:DOID_1612 owl:sameAs wikidata:Q128581 .
